

**EXPLORE THE INNER LIFE OF TOYS AT <<MUSEUM NAME>>**

<<CITY>> If your parents never let you break open your Etch A Sketch® to find out how it works, or if you've been wondering how to stop your toddler's push toy from making such an infernal racket, you'll love *Toys: The Inside Story*. This new exhibition illustrates the simple mechanisms commonly found in toys, and lets visitors create their own toy-like combinations of gears, pulleys, linkages, cams, and circuits. *Toys: The Inside Story* is now on display at <<MUSEUM NAME HERE>> from <<DATES HERE>>

The exhibition was developed by the Montshire Museum of Science in Norwich, Vt., as part of the Traveling Exhibits at Museums of Science (TEAMS) collaborative. Funded by a grant from the National Science Foundation, this appearance of *Toys: The Inside Story* is sponsored by <<DATES HERE>>.
